

# Gas Technology

HEAT Gastechnische Anlagen is a leading manufacturer of components, systems and services in natural gas production, processing and distribution sector.

The company focuses on the areas

- apparatus, such as filters, separators and heat exchangers
- natural gas reducing stations with reference and output volume control, even for the high pressure area
- pressure regulators for gas networks, industry and households
  - o inlet pressures up to 150 bar, nominal sizes up to DN 500
  - o pilot- operated, spring- loaded and regulators with electric drive
- safety devices, such as SAV and SBV, SAV for hot water
- natural gas drying systems with process priorities
  - o cold drying (Low Temperature Technology - LTS) and
  - o gas drying systems based on glycol technology (TEG)

HEAT provides complete solutions from a single source. More than 25 years experience in engineering, detail design, production, installation and commissioning guarantee an economically and technically effective and customized implementation.
