

Environmental Technology

E.U.T. is the specialist in air purification and heat recovery. Particularly in the areas of air purification, solvent recovery and cooling technology, the requirements are diverse and versatile - the constant expansion of knowledge and the application of the latest technologies ensure security and efficiency in almost any industry. E.U.T. has developed different processes and applications for these tasks; well- known methods are

- exhaust air purification with thermal afterburning - TNV
- exhaust air purification with catalytic afterburning - KNV or
- concentration with TNV

The systems are developed according to customer needs, environmental and economic aspects shape the solution style.
