

ACTUATORS

Series RM, RMP DM, DMP LD, LDP

1] Diaphragm Type Spring Return Actuators [Linear & Rotary applications]: The Versatile and Simple, Low operating Air Pressure requirements and high level of reliability make these actuators most popular amongst users.

Options available: Field Reversibility, Double Acting, Manual Override [Top mounted as well as Side mounted], Standard Yoke, Pillar type, Tandem Actuators.

2] High Power Linear Piston Cylinder [Single & Double Acting]: For applications where high power thrust is essential, this actuator offer better solution. Options: Manual Override.

PNEUMATIC ACCESSORIES

A] Pneumatic Valve Positioner:

- 1] Single Acting: DVP-DA, SP-45
- 2] Double Acting: SP-45

B] Air Lock: It entraps the air pressure within the actuator and maintains the status co-position of the valve controlling elements. When supply air pressure starts declining beyond set point .

C] Volume Booster: It just speeds up the operating time of valve as per requirement.
